

Patterns, Equations, and Graphs Bell Work

Tell whether the given equation has the ordered pair as a solution.

1. $y = \frac{3}{4} - x$ $(2, \frac{5}{4})$

2. $y = 7 - 3x$ $(1, 4)$

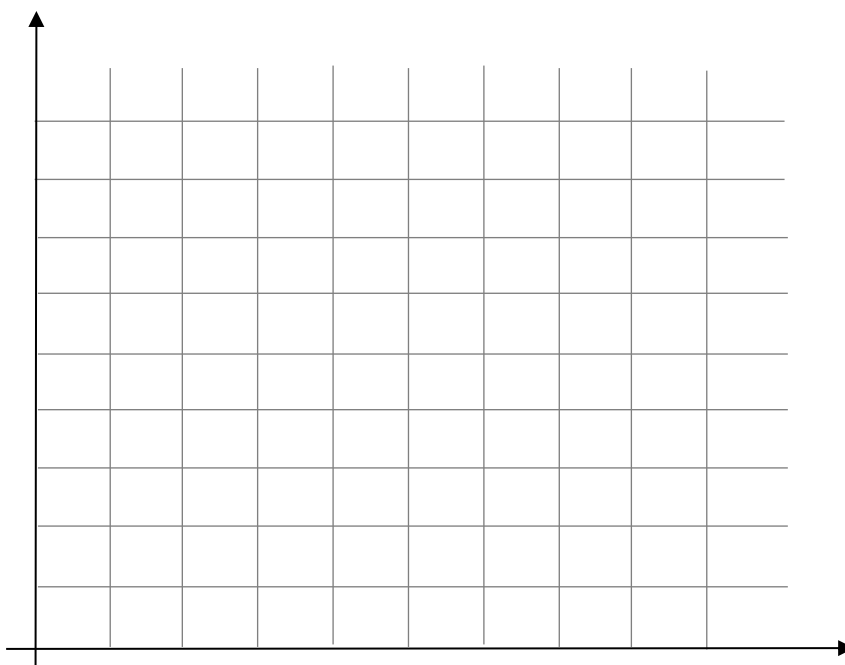

3. $y = -x$ $(1, -1)$

4. $x - 10 = \frac{2}{5}y$ $(4, -15)$

5. $4y = 5x$ $(4, 5)$

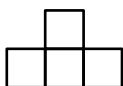

Use a table, an equation, and a graph to represent each relationship.

6. A salesman has a weekly salary of \$300 and \$10 for every machine he sells.

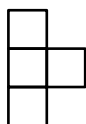

Predict the next figure in the each sequence.

ANSWER

Tell whether the given equation has the ordered pair as a solution.

1. $y = \frac{3}{4} - x$ $(2, \frac{5}{4})$

$$y = \frac{3}{4} - x \rightarrow \frac{5}{4} = \frac{3}{4} - 2$$

$$\frac{5}{4} = \frac{3}{4} - \frac{8}{4} \rightarrow \frac{5}{4} \neq -\frac{5}{4}$$

2. $y = 7 - 3x$ $(1, 4)$

$$y = 7 - 3x$$

$$4 = 7 - 3(1)$$

$$4 = 4$$

3. $y = -x$ $(1, -1)$

$$y = -x$$

$$-1 = -1$$

5. $4y = 5x$ $(4, 5)$

$$4y = 5x$$

$$4(5) = 5(4)$$

$$20 = 20$$

4. $x - 10 = \frac{2}{5}y$ $(4, -15)$

$$x - 10 = \frac{2}{5}y \rightarrow 4 - 10 = \frac{2}{5}(-15)$$

$$-6 = \frac{2}{5}(-15) \rightarrow -6 = 2(-3)$$

$$-6 = -6$$

Use a table, an equation, and a graph to represent each relationship.

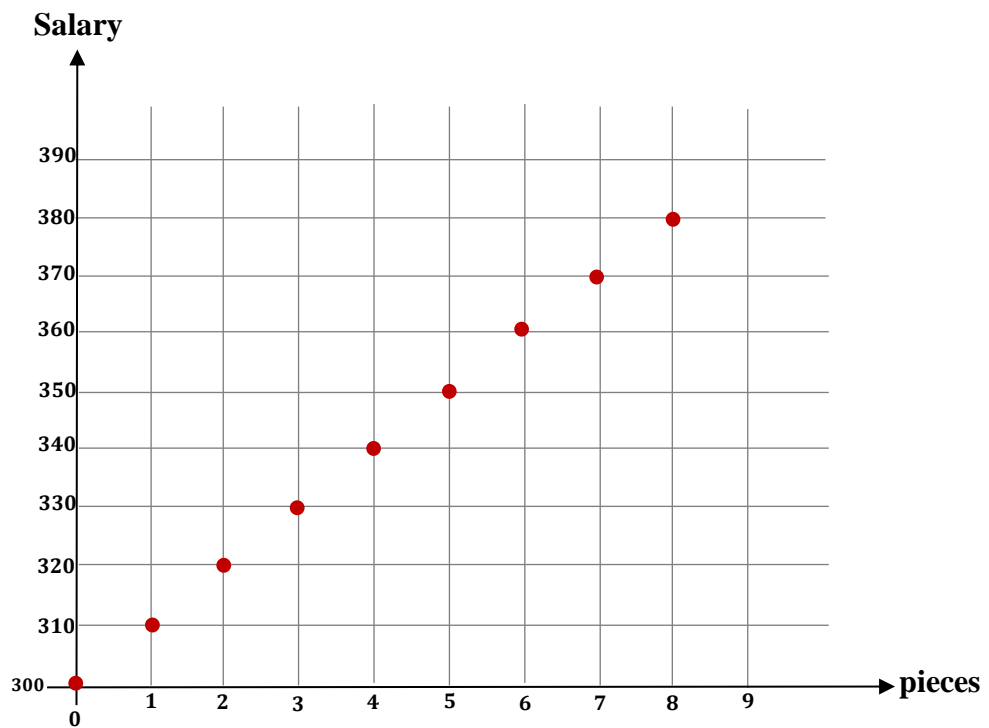

6. A salesman has a weekly salary of \$300 and \$10 for every machine he sells.

$$s = 300 + 10(x)$$

Where: s = Total salary

x = number of machine sold

x (pcs)	s (\$)
0	300
1	310
2	320
3	330
4	340
5	350
6	360
7	370
8	380
