## AN INTRODUCTION TO EQUATIONS

EQUATION is a mathematical sentence that uses an equal sign (=). It can be used to represent the relationship between two quantities that have the same value.

## TYPES

## True equation

If the expressions on either side of the equal sign are equal.

$$
1+9=10
$$

$$
10+2=8+4
$$

## AN INTRODUCTION TO EQUATIONS

## TYPES

## False equation

If the expressions on either side of the equal sign are not equal.

$$
2+8=11 \quad 11+2=9+5
$$

## Open Sentence

If the equation contains one or more variables, and maybe a true or a false depending on the values of its variables.

$$
x+5=14 \quad 8+x=13
$$
