
Variables and Expressions
Unit 1 Lesson 1

## VARIABLES AND EXPRESSIONS

## Students will be able to:

write mathematical expressions for verbal expressions, and vice versa.

## Key Vocabulary:

- Variables
- Algebraic Expression
- Factors
- Product
- Power
- Base
- Exponent

## VARIABLES AND EXPRESSIONS

VARIABLES are symbols used to represent unspecified numbers or values. Any letter can be used as a variable.

$$
x, \quad y, \quad z, \quad a, \quad r, \quad d, \quad s
$$

## VARIABLES AND EXPRESSIONS

ALGEBRAIC EXPRESSION consists of one or more numbers and variables along with one or more arithmetic operation.

$$
6 y, \quad 7 x-3, \quad 9+\frac{r}{s}, \quad k \cdot 5 j, \quad 5 a b \div 3 c d
$$

Various ways to represent a product of $\boldsymbol{x}$ and $\boldsymbol{y}$ :

$$
x y, \quad x \cdot y, \quad x(y), \quad(x) y, \quad(x)(y)
$$

In each expression above, the quantities being multiplied are called factors, and the result is called the product.

## VARIABLES AND EXPRESSIONS

## Translating Verbal Expression into Algebraic Expression:

| Addition | Subtraction |
| :---: | :---: |
| Plus | Minus |
| Sum of | Difference between/of |
| More than | Less than |
| Increased by | Decreased by |
| Combined | Fewer than |
| Together |  |
| Total of |  |
| Added to |  |

| Multiplication | Division |
| :---: | :---: |
| Times | Divided |
| Product of | Quotient of |
| Multiplied by | Ratio of |
|  | Per |
|  | Out of |
|  | percent |

## VARIABLES AND EXPRESSIONS

## Translating Verbal Expression into Algebraic Expression:

Example: three more than a number $\boldsymbol{x}$
Verbal Expression: $\underbrace{\text { three }}_{\text {Algebraic Expression: }} \underbrace{\text { more than }}_{3} \underbrace{\underbrace{\text { a number } \boldsymbol{x}}_{\boldsymbol{x}}}_{+}$

## VARIABLES AND EXPRESSIONS

## Sample Problem 1: Write each expression algebraically.

a. The product of 8 and a number $\boldsymbol{x}$
b. The difference between 16 and $\boldsymbol{x}$ squared
c. The sum of 7 and $\boldsymbol{m}$
d. $\boldsymbol{x}$ divided by three
e. Four times eight plus $\boldsymbol{n}$

## VARIABLES AND EXPRESSIONS

## Sample Problem 1: Write each expression algebraically.

a. The product of 8 and a number $\boldsymbol{x}$
b. The difference between 16 and $\boldsymbol{x}$ squared
c. The sum of 7 and $\boldsymbol{m}$
d. $\boldsymbol{x}$ divided by three
e. Four times eight plus $\boldsymbol{n}$
$=8 x$
$=16-x^{2}$
$=7+m$
$=\frac{x}{3}$
$=4(8+n)$

## VARIABLES AND EXPRESSIONS

POWER is an expression that represents repeated multiplication of the same factor.

$$
x^{n}
$$

where:
$\boldsymbol{x}=$ base
$\boldsymbol{n}=$ exponent, which corresponds to the number of times the base is used as a factors

## VARIABLES AND EXPRESSIONS

POWER is an expression that represents repeated multiplication of the same factor.

| Symbol | Words | Meaning |
| :---: | :---: | :---: |
| $\mathbf{2}^{\mathbf{1}}$ | $\mathbf{2}$ to the first power | $\mathbf{2}$ |
| $\mathbf{2}^{\mathbf{2}}$ | $\mathbf{2}$ to the second power | $\mathbf{2} \cdot \mathbf{2}$ |
| $\mathbf{2}^{\mathbf{3}}$ | $\mathbf{2}$ to the third power | $\mathbf{2 \cdot 2 \cdot 2}$ |
| $\mathbf{2}^{\mathbf{4}}$ | $\mathbf{2}$ to the fourth power | $\mathbf{2} \cdot \mathbf{2} \cdot \mathbf{2} \cdot \mathbf{2}$ |
| $\mathbf{2}^{\mathbf{5}}$ | $\mathbf{2}$ to the fifth power | $\mathbf{2 \cdot 2 \cdot 2 \cdot 2 \cdot \mathbf { 2 }}$ |
| $\mathbf{2 n}^{\mathbf{6}}$ | $\mathbf{2}$ times $\boldsymbol{n}$ to the sixth power | $\mathbf{2 \cdot n \cdot n \cdot \boldsymbol { n } \cdot \boldsymbol { n } \cdot \boldsymbol { n } \cdot \boldsymbol { n }}$ |
| $\boldsymbol{x}^{\boldsymbol{n}}$ | $\boldsymbol{x}$ to the $\boldsymbol{n}$ th power | $\boldsymbol{x} \cdot \boldsymbol{x} \cdot \boldsymbol{x} \cdot \boldsymbol{x} \cdot \boldsymbol{x} \cdot \ldots \cdot \boldsymbol{x}$ |

## VARIABLES AND EXPRESSIONS

POWER is an expression that represents repeated multiplication of the same factor.

Example: $\mathbf{2}^{\mathbf{6}}$

## VARIABLES AND EXPRESSIONS

## Sample Problem 2: Find each value.

## VARIABLES AND EXPRESSIONS

## Sample Problem 2: Find each value.

$$
\begin{array}{lll}
\text { A. } 3^{2}=3 \cdot 3 & =9 \\
\text { B. } \quad 4^{3}=4 \cdot 4 \cdot 4 & =64 \\
\text { C. } 5^{2}=5 \cdot 5 & =25 \\
\text { D. } \quad 6^{2}=6 \cdot 6 & =36 \\
\text { E. } \quad 2^{4}=2 \cdot 2 \cdot 2 \cdot 2=16
\end{array}
$$

## VARIABLES AND EXPRESSIONS

## Translating Algebraic Expression into Verbal Expression:

## Example: 4m

Algebraic Expression:

Verbal Expression:

four

times
a number $\boldsymbol{m}$
The product of 4 and $\boldsymbol{m}$

## VARIABLES AND EXPRESSIONS

Sample Problem 3: Write a verbal expression for each algebraic expression.
A. $3-t$
B. $y+9$
C. $\frac{6}{s}$
D. $4 z$
E. 21d-3

## VARIABLES AND EXPRESSIONS

Sample Problem 3: Write a verbal expression for each algebraic expression.
A. $\mathbf{3 - t}=$ the difference between $\mathbf{3}$ and $\boldsymbol{t}$
B. $\boldsymbol{y}+\mathbf{9}=$ the sum of $\boldsymbol{y}$ and $\mathbf{9}$
C. $\frac{6}{s} \quad=$ the ratio between 6 and $s$
D. $\mathbf{4 z}=$ the product of $\mathbf{4}$ and $\mathbf{z}$
E. 21d - $\mathbf{3}$ = the difference between $\mathbf{2 1}$ times $\boldsymbol{d}$ and $\mathbf{3}$
